# DSRIP Care Redesign: Avoidable ED Visits and Inpatient Readmissions

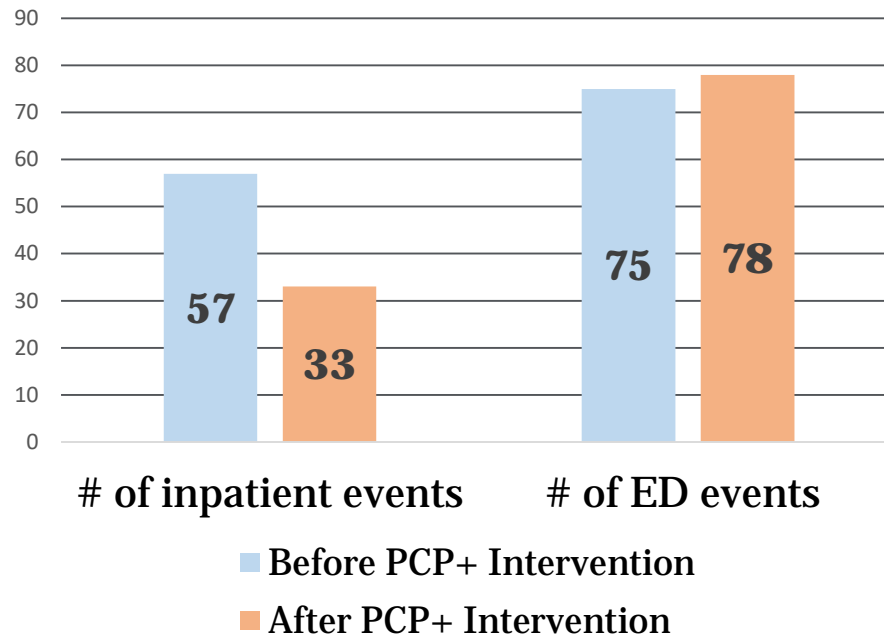

Since June 2014, NYU Langone Brooklyn PPS made significant progress in reducing avoidable hospital use, focusing on potentially preventable measures

- Potentially Preventable ED Visits (PPV)  
49% decrease from base year and 69% better than All PPS average
- Potentially Preventable Readmissions (PPR)  
67% decrease from base year and 77% better than All PPS average

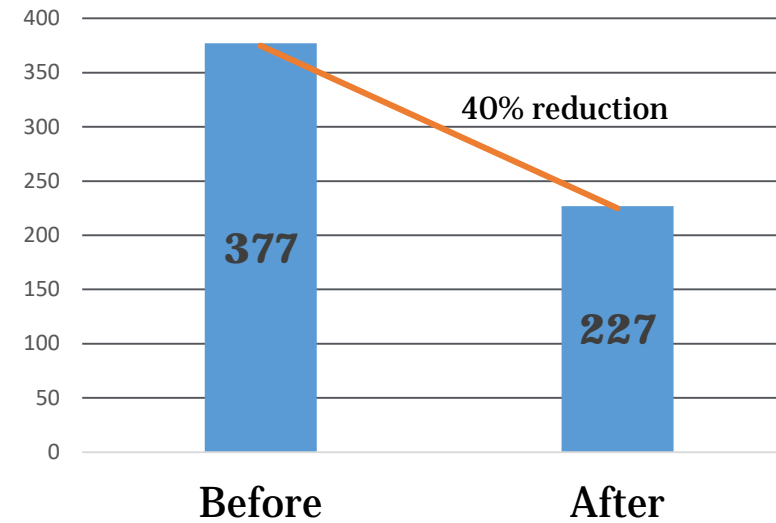

# PCP+ has a significant impact on hospital utilization...

## Hospital Utilization

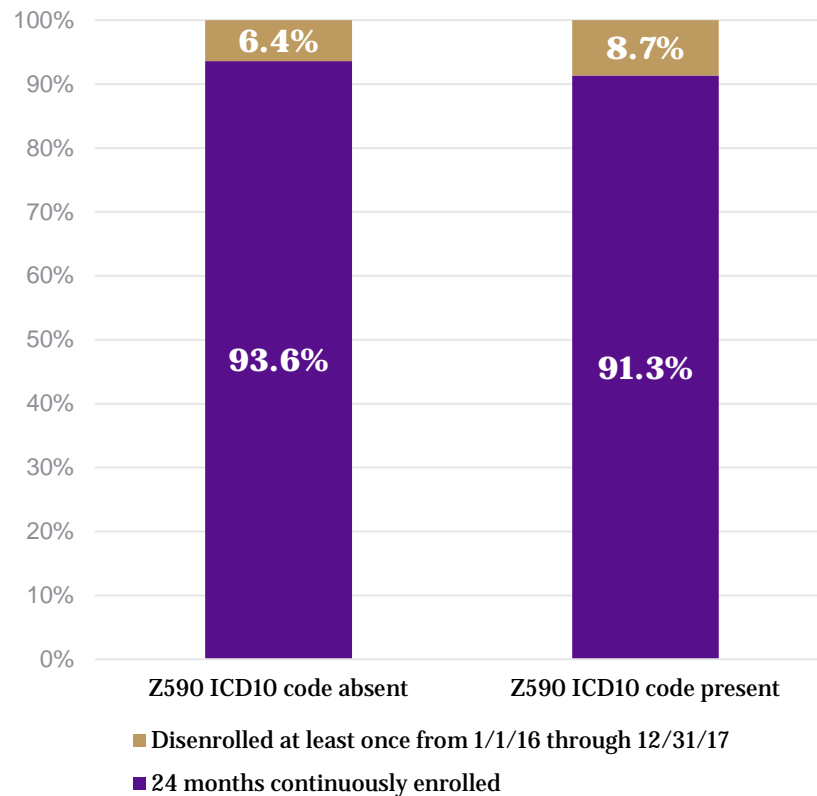

## Total #Hospital Days

# "Churn" undermines VBP contracting

Medicaid "Churn" vs Z590 Coding for Homelessness

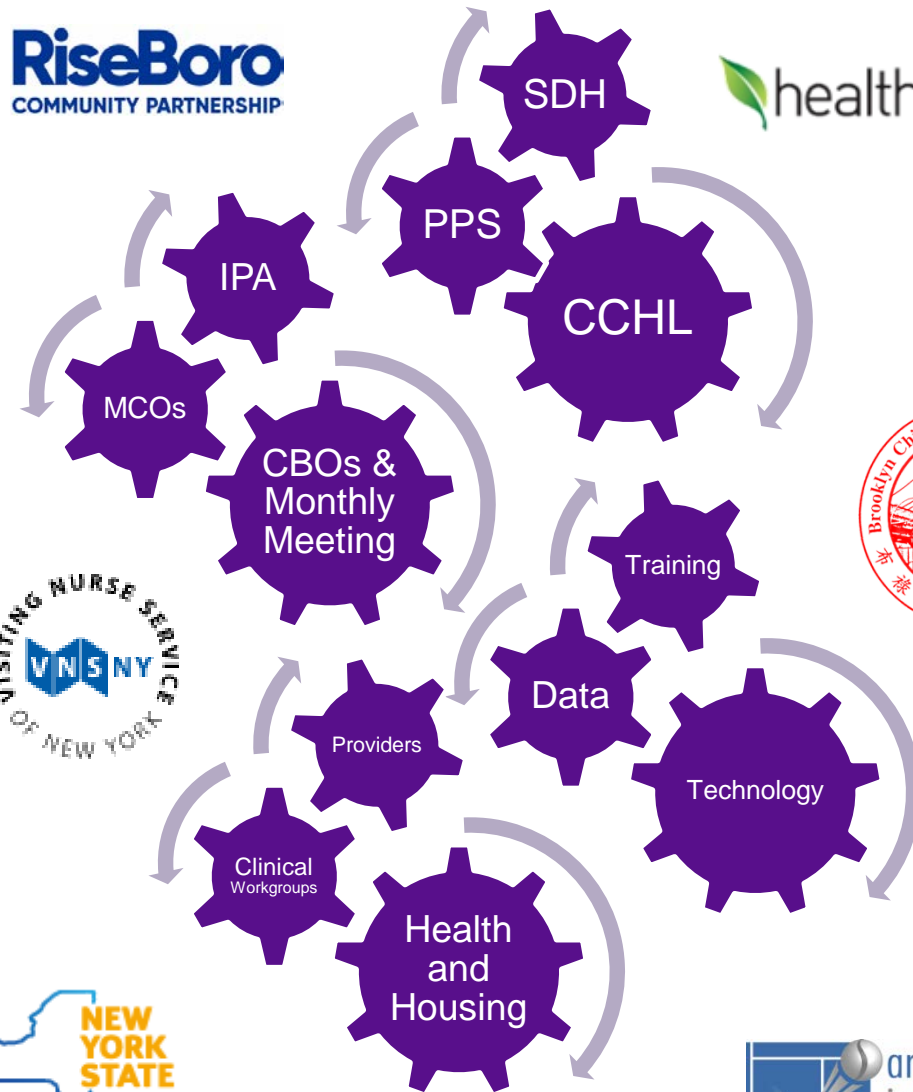

## The Costs of Churn

### Recipients:

- Lost benefits
- No coverage for medical visit
- Poorer outcomes

### Organization:

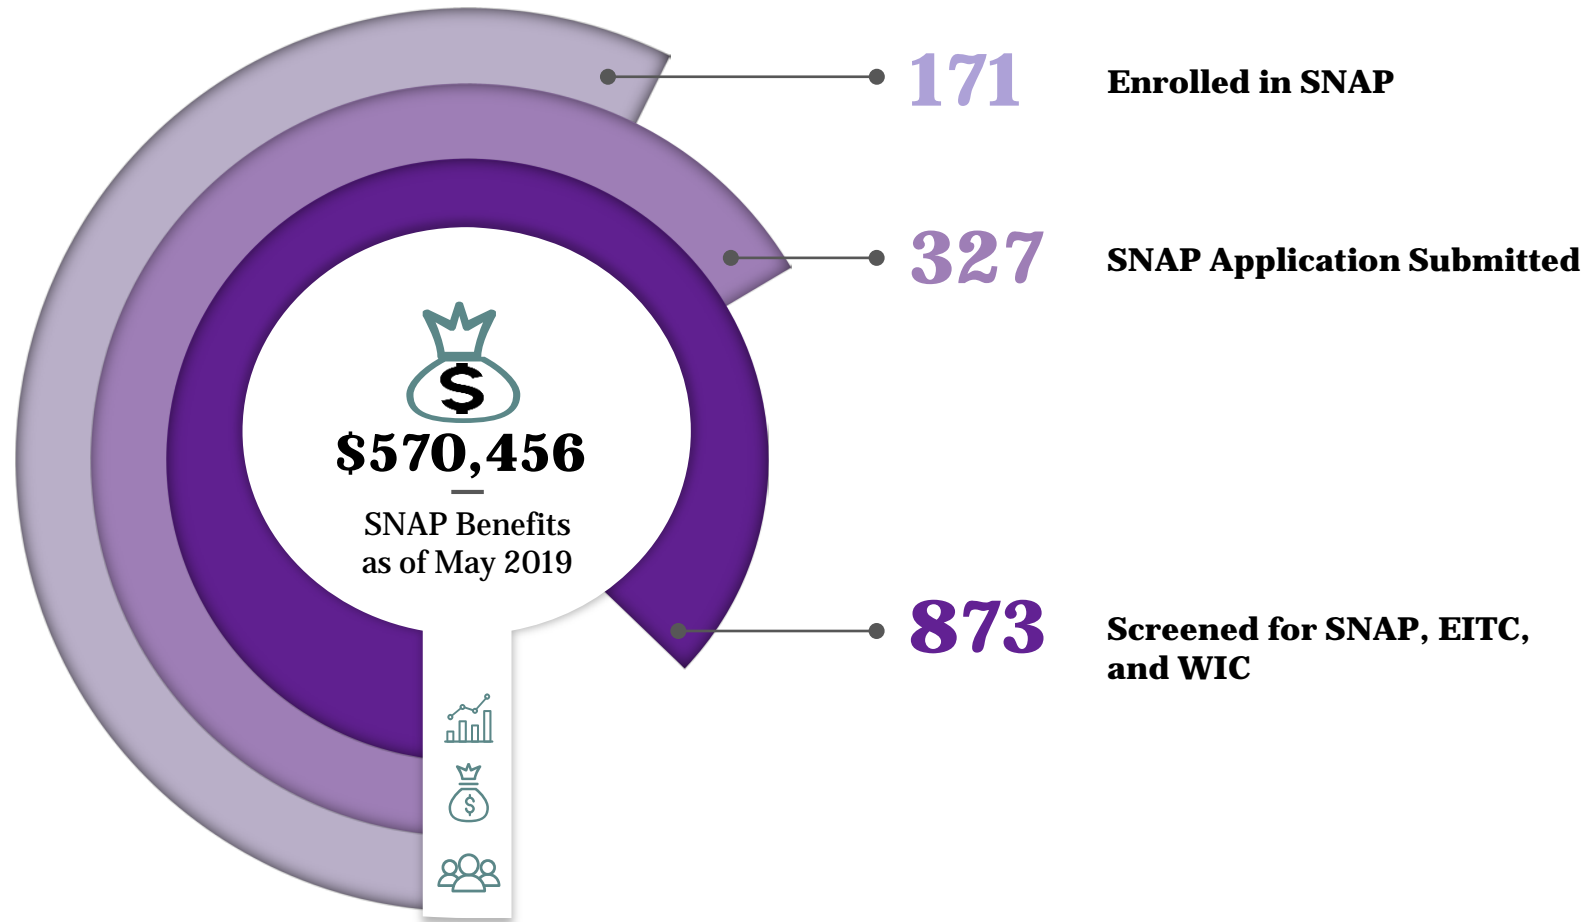

- Negative impact on revenues
- Negative impact on uncompensated care costs
- Negative impact on operating margins

Arab-American Family Support Center  
المركز العربي الامريكى للخدمات الاجتماعية

# Outcomes

Average household income of enrollees: \$9,830
